WORK EXPERIENCE

TELEKOM MALAYSIA RESEARCH & DEVELOPMENT (TM R&D)

Cyberjaya, Selangor

Software Engineer

Dec 2025 – Present

- Built and maintains a nationwide incident **tracking dashboard** using **Angular**, enabling real-time assignment and monitoring of field contractors across Malaysia for the country's largest telecommunications provider
- Led **Flutter mobile development** for Smart Urban Forestry - an **AI-enabled** ecosystem monitoring tool built with Credence and FRIM - awarded **Gold Star** (Purposeful Partnership) for contributions to climate resilience and biodiversity conservation
- Built and deployed a **Flutter-based** smart safety helmet application for **construction workers**, enabling real-time video, audio, and photo capture, live video calling, and GPS location tracking - improving on-site **safety monitoring** and remote coordination

LESTARI ALAM SEKITAR SDN BHD

Seremban, Negeri Sembilan

Software Engineer

Jul 2025 – Nov 2025

- Engineered a full-stack automated tracking system with AI integration using **Vue.js** and **Laravel**, reducing manual tracking effort and enabling real-time data visibility across the application
- Defined **end-to-end technical specifications** for full-stack web applications, covering UI/UX, server-side logic, and database models, accelerating development and reducing cost for engineering teams
- Built and trained an object detection model using **Python-based machine learning** frameworks on video and image datasets, delivering accurate real-time detection capabilities for production use

AERONERVE INSTITUTE

Bangi, Selangor

Full Stack Engineer (Internship)

Jul 2024 – Sep 2024

- Maintained a **full-stack** internal tracking application using **Angular** and **Node.js**, streamlining project management workflows and reducing administrative overhead for the system control team
- Utilized **Python** such as **Pandas**, **NumPy**, and **Matplotlib** to track, process, and visualize drone performance data and flight logs, reducing data processing time by **>50%**

EDUCATION

UNIVERSITY OF SHEFFIELD

Sheffield, United Kingdom

Bachelor of Science (Computer Science)

Sep 2022 - July 2025

Results: Second Upper Class Honours (2:1)

Relevant Coursework(s): Artificial Intelligence, Cybersecurity, Machine Learning, Mobile Development, Web Development

PROJECTS

FRAUDAI: AI-POWERED FRAUD DETECTION (DERIV.AI HACKATHON)

- Engineered a **fraud detection MVP** that processes live transaction data to identify anomalies, utilizing **automated pattern recognition** to reduce **>90%** manual review time

SHARKS HUNTING SHOALS SIMULATION (FINAL YEAR PROJECT)

- Developed a high-fidelity **3D simulation** of predatory shark behavior and schooling fish dynamics in **Unity/C#**, implementing complex **flocking algorithms (Boids)** and AI pathfinding

TECHNICAL SKILLS

AI Coding Assistants: Claude Code, Cursor, OpenAI Codex

Frameworks & Tools: Angular, CI/CD, Dart, Docker, Flutter, Git, Laravel, MySQL, Node.js, OpenCV, PostgreSQL, Postman, PyTorch, React, REST API, scikit-learn, Supabase, Tailwind CSS, TypeScript, Vercel, Vue.js

Programming Languages: C#, C++, Dart, Java, JavaScript, Kotlin, PHP, Python, Ruby, SQL, Swift, TypeScript

Languages: Arabic (Basic), English (Proficient), Malay (Fluent)
